Case Study Feb 2010:

OT200's installed throughout award winning School near Frankfurt

OpeMed have installed the OT200 ceiling hoist throughout an award winning new-build specialist school near Frankfurt, Germany.

The architect was attracted by our project management from start to finish, whilst the nursing staff were particularly impressed by the self-charging feature that means the risk of a flat battery is minimised.

In total 40 rooms were completed many with 6m XY systems, gates and turntables.
